PROJECTS

- 1. Production-Ready Cloud-Native 3-Tier Food Ordering Platform on Kubernetes**  [GitHub Link](#)
 - Architected and deployed a **3-tier containerized food ordering platform** consisting of **Frontend, Backend, and MongoDB** using Docker and Kubernetes.
 - Provisioned and administered **10+ Kubernetes resources** including Deployments, Services, ConfigMaps, Secrets, PersistentVolumeClaims, and Ingress for scalable application deployment.
 - Containerized **3 application services** using Docker and streamlined image management through Docker Hub, reducing environment setup time by **80%**.
 - Engineered an end-to-end **CI/CD pipeline** integrating Jenkins, GitHub Webhooks, Docker, and Kubernetes, reducing deployment effort by **90%** while accelerating software delivery through continuous integration and deployment.
- 2. CI/CD Pipeline Automation using Jenkins, Docker and AWS**  [GitHub Link](#)
 - Designed and orchestrated a 5-stage CI/CD workflow using Jenkins, GitHub Webhooks, Docker, and AWS EC2, enabling automated build, test, and deployment processes.
 - Eliminated repetitive deployment tasks through CI/CD automation, improving release efficiency by 90%.
 - Optimized deployments using Docker, reducing release time from 30 minutes to 5 minutes (6x faster).
 - Integrated monitoring and alerts with 100% pipeline visibility using email notifications.
- 3. Infrastructure as Code (IaC) on AWS with Terraform**  [GitHub Link](#)
 - Provisioned AWS infrastructure (VPC, EC2, IAM) using Terraform, reducing provisioning time to under 5 minutes.
 - Created 6+ reusable Terraform modules, improving scalability and reducing duplication by 60%.
 - Configured remote backend using AWS S3 and DynamoDB for secure state management and locking.
 - Reduced manual provisioning effort by 80% using Infrastructure as Code (IaC).
- 4. Full Stack Chat Application Deployment using Kubernetes**  [GitHub Link](#)
 - Developed a real-time full-stack chat application using React, Node.js, and MongoDB on Kubernetes.
 - Orchestrated containerized application deployments using GitHub Actions, Docker, and Kubernetes, enabling automated releases with rolling updates and zero-downtime deployment.
 - Administered 10+ Kubernetes resources including Pods, Services, Ingress, and Secrets for secure communication.
 - Achieved 99% availability using container orchestration, scaling, and rolling updates.

EDUCATION

Birla Institute of Applied Sciences, Bhimtal, Uttarakhand	<i>2023 – Present</i>
<i>B.Tech in Computer Science and Engineering</i>	<i>CGPA: 8.2</i>
Chhauni Children's Academy	<i>2022</i>
<i>Class 12th</i>	<i>82%</i>

TECH STACK

- **Cloud Infrastructure:** AWS
- **Infrastructure as Code (IaC):** Terraform
- **Configuration Management:** Ansible
- **Version Control:** Git, GitHub, GitLab
- **Monitoring & Logging:** Prometheus, Grafana
- **Containers & Orchestration:** Docker, Kubernetes
- **Scripting:** Bash, Python
- **Operating Systems:** Linux (Ubuntu)
- **Other:** YAML, Networking

ACCOMPLISHMENTS

- National Finalist – Smart India Hackathon (SIH) 2025.
- 3rd Runner-up – NASA Space Apps Challenge 2025.
- Earned YOLO and Pull Shark badges on GitHub for open-source contributions.
- Active technical blogger on Hashnode publishing DevOps and cloud engineering articles.
